Mechanical and Rigging

Inventory

## Hull Structural

- The hull is of single-skinned GRP construction.
- Local areas of reinforcement (keel, rudder, chainplates, hull/deck joint) serve to strengthen the structure.
- A single-skinned structural inner moulding is bonded to the hull.
- Its structural role is important as it takes and absorbs the stresses at pressure points (mast foot, keel, rudder, etc.), ensuring their distribution and so guaranteeing reduced strain on the hull.
- The surface of the inner moulding makes cleaning easier and provides a better finish.
- Her Navy Blue Topsides were re-sprayed in 2022
- Bottom is copper coated.

## Deck Structural

- The deck is of glass fibre and balsa sandwich injection construction for optimum strength / lightness ratio as well as excellent heat and sound insulation.
- All working areas and areas of movement around the deck are provided with a non-slip "diamond point" finish.

HULL / DECK JOINT

- The hull/deck joint is screwed and bonded and surrounded by a solid wooden bulwark.
- This mechanical join ensures a watertight assembly whilst also improving safety when moving about on deck.

## Exclusive Version

EXCLUSIVE PACK

- Vertical electric 1000 W windlass with up / down control.
- Stereo radio / CD / MP3 player with two speakers in the saloon and two waterproof speakers in the cockpit.
- 12V refrigeration unit in the icebox.
